

Live Content Everywhere

**Opening the Internet to deliver high quality live
content to any glass**

Comprehensive knowledge in designing and selling solutions to operators, broadcasters, Teleports, and OTTs

Extensive video and networking expertise ensures the delivery of error-free high quality live content over any network including the Internet

Intellectual Property

- Four patents pending
- Sixteen additional patents in the areas of high quality live video delivery and optimization are in the pipeline

VideoFlow's portfolio

- ✓ Generates new revenue
- ✓ Secures existing revenue
- ✓ Significantly cuts costs

Relieving the Live Content Delivery Pain

VideoFlow's Digital Video Protection (DVP) product line overcomes the challenges of delivering live high quality video over the public Internet

The Public Internet Pain

The Internet is challenging for live video

Delay fluctuations (Jitter) is challenging. Jitter can cause decoders to lose synchronization

Packet loss may be a result of the physical link limitations and/or network congestion. Packet loss will cause degradation to the video quality (artifacts)

Secured VPN tunnel is a must

The only way to deliver multicast over the Internet
Often requires additional appliances and/or services

Reasonable video quality demands expensive solutions

Commercial grade service level agreement (SLA)
Leased lines

But Not Any More...

VideoFlow's DVP is turning the Internet into a true Live Content Delivery Network (LCDN)

VideoFlow Digital Video Protection (DVP) New Dimensions, New Possibilities, New Opportunities

Tested and deployed globally by teleports, broadcasters and operators

- Recovered 100% of lost packets at 35% network packet loss (Russian Network)
- Recovered 100% of lost packets and eliminated jitter in a low bit rate contribution (0.5-2Mbps) over standard A/VDSL Internet connections
- Eliminated a staggering 1.6sec jitter in a live broadcast over Ka band Satellite (Europe)
- Eliminated 500msec jitter in a long haul connection contribution from Europe and the Far East
- Eliminated 475msec jitter in a seven-hops network (Eastern Europe)

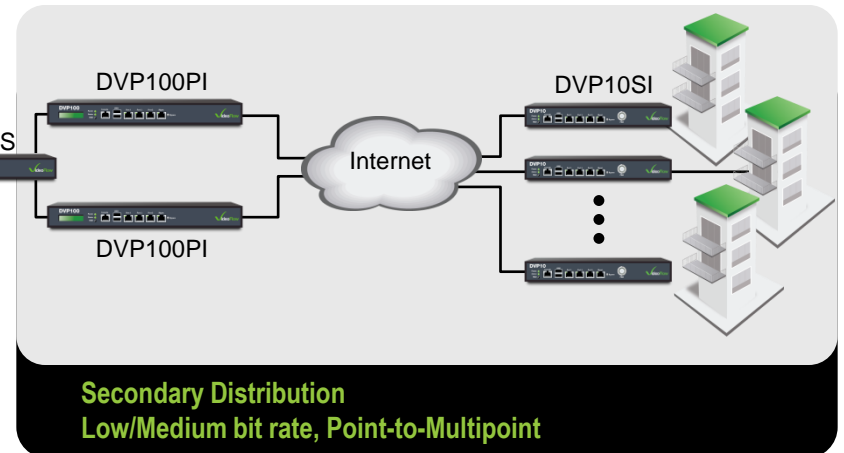

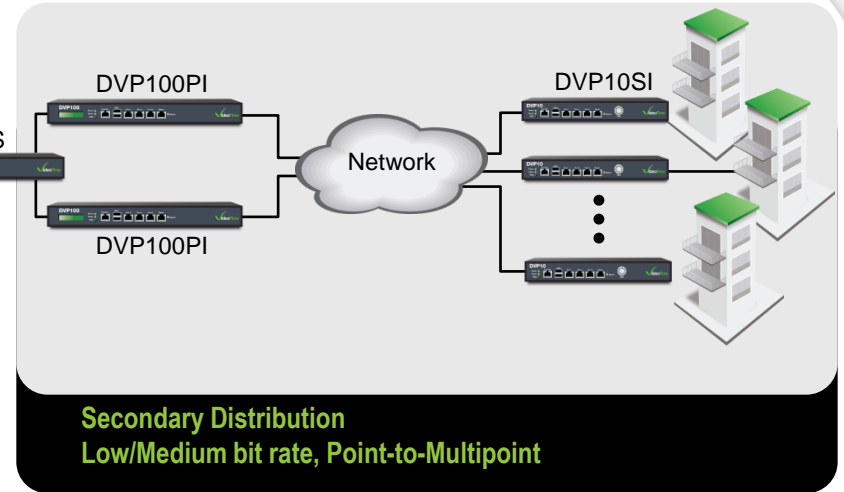

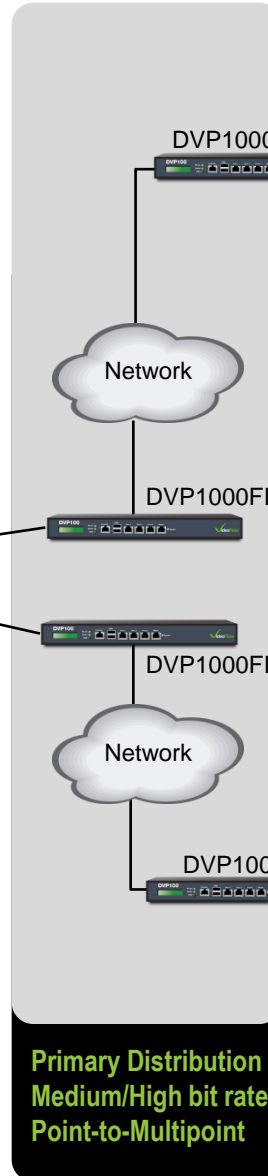

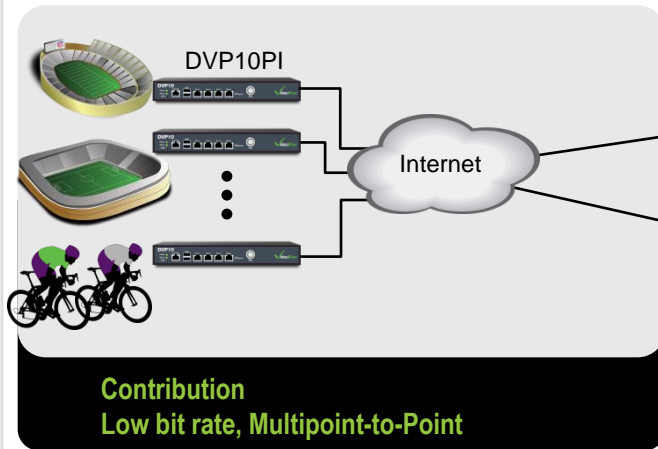

VideoFlow 's Patent Pending 3V Technology and Intellectual Property is turning the Internet into error-free live high quality content delivery network

- **VFEC** – VideoFlow Error Correction is making sure high quality video is maintained at all times
- **VFAB** – VideoFlow Advanced Buffering **eliminates** excessive jitter enabling the delivery of live high quality video over long distances across the Internet
- **VPN** – Secured VPN tunneling is the only solution to **deliver** secured live video across the Internet
 - No need for external router to open VPN tunnel
 - No need for premium services from ISP

Digital Video Protection (DVP) Solution's Overview

Protector at the source
Sentinel at the destination
Fortress at the source, destination,
or transit

1

Generating New Revenue

Enables the flexibility to choose your partners and to open new markets otherwise out of reach as well as enhances existing CDNs with Live Video capabilities

2

Securing Existing Revenue

Lowers the costs of live content delivery, improves margins, and allows offering services at a lower cost easily competing with satellite and legacy transport networks by opening the Internet to carry high quality live content over **long distances**

3

Significantly Cutting Cost

Uses **standard Internet connections** to lower the cost of high quality live content delivery without quality compromise as well as replacing expensive backup or primary leased lines

Live Stream Over the Internet

Packet loss = 1%, Delay = 100msec, Jitter = 50msec

Protection = **OFF**

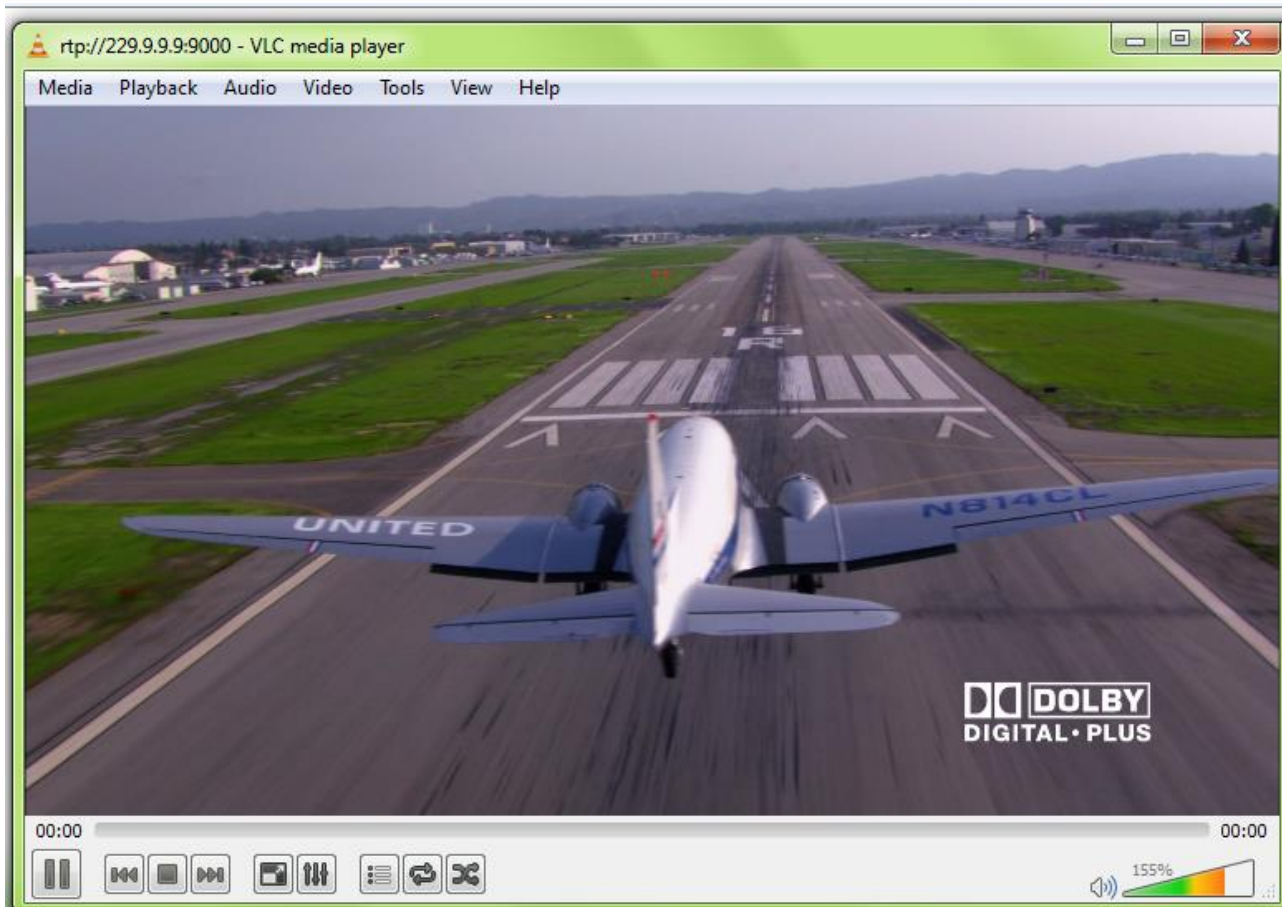

Quality of experience is **ANNOYING!**

Live Stream Over the Internet – With VideoFlow

Packet loss = 1%, Delay = 100msec, Jitter = 50msec
Protection = ON

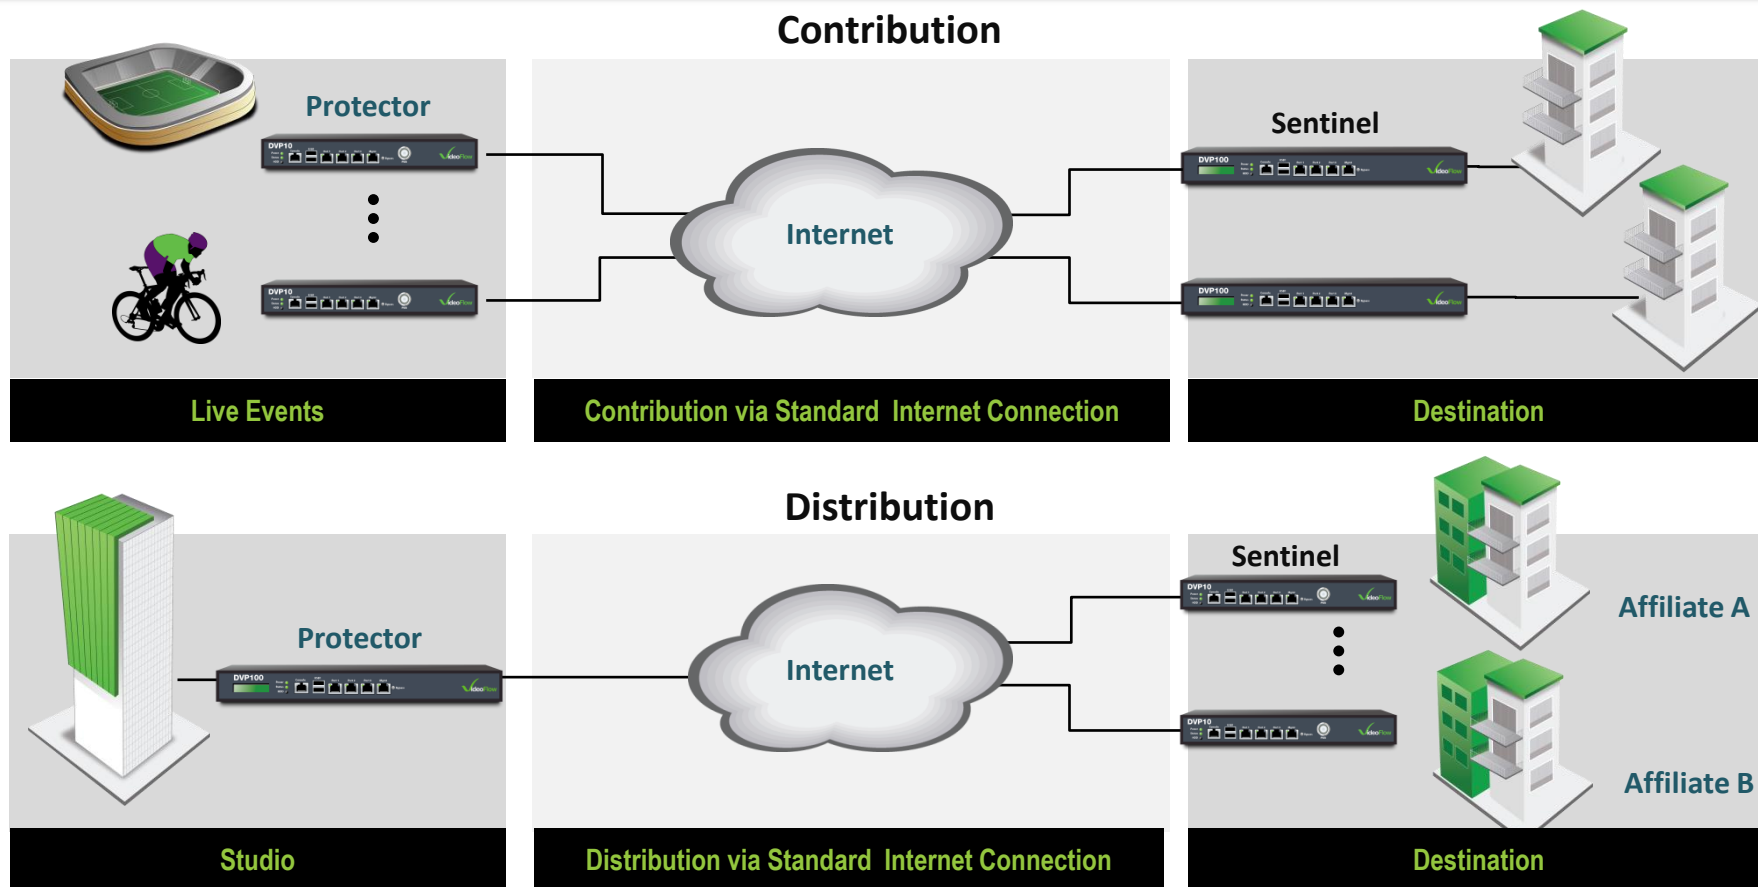

Network issues remain but QoE is OUTSTANDING!!!

Cutting Costs – Leveraging the Internet

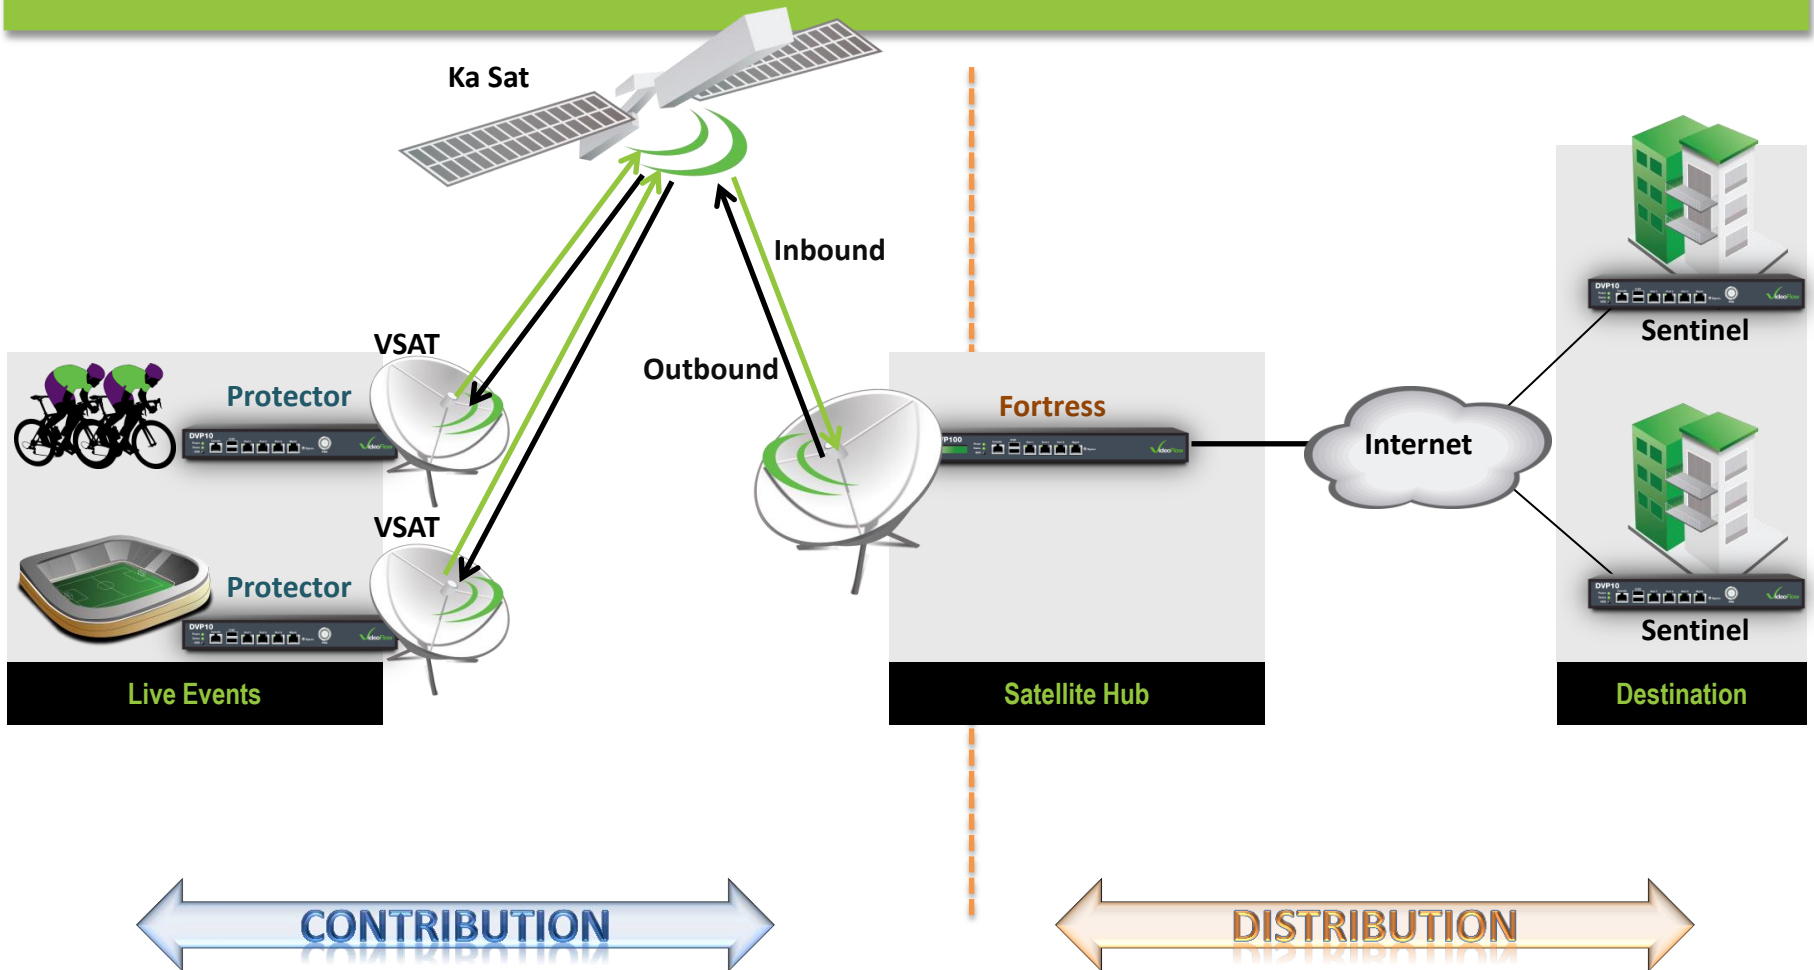

The cost of Live Content Delivery over the Internet is considerably lower than current solution

Cutting Costs – Internet via Satellite

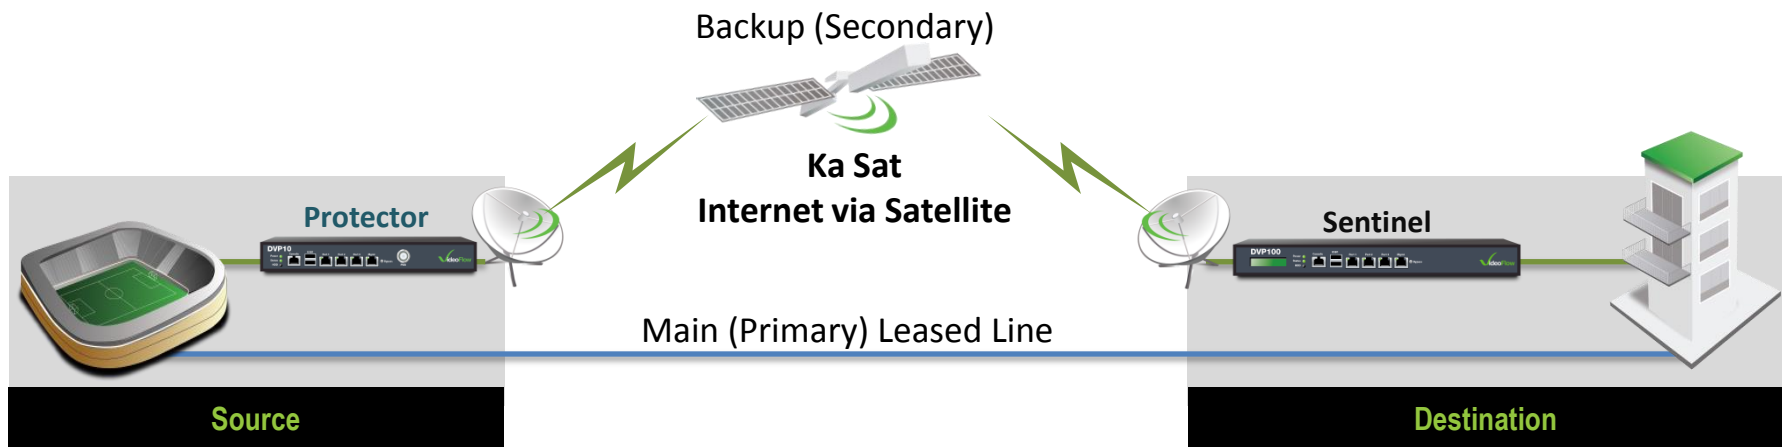

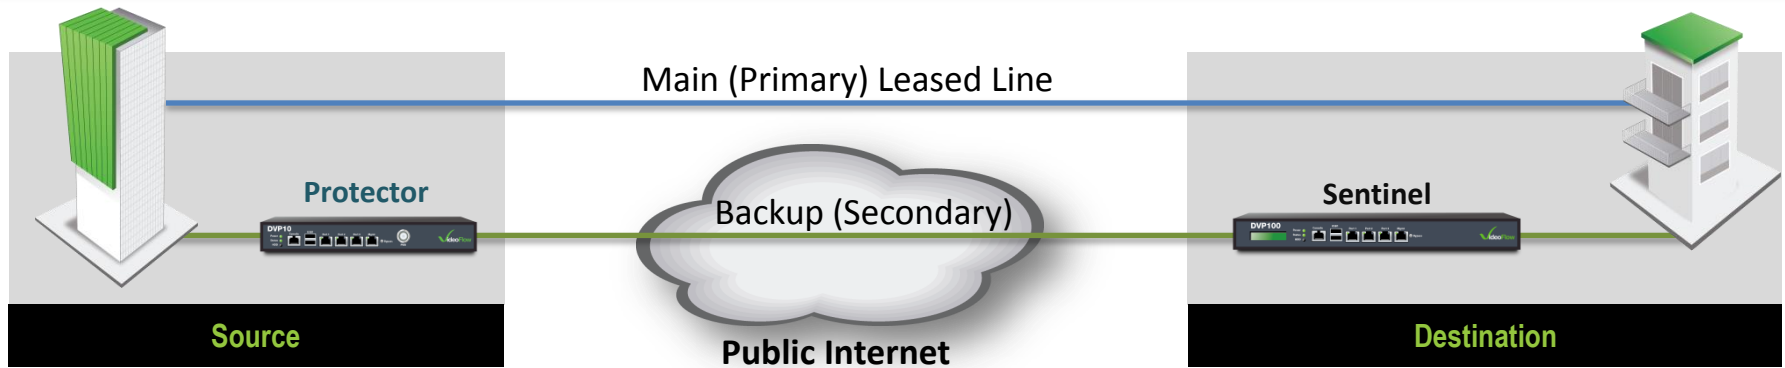

Until VideoFlow, using Low-cost Ka Band satellite connectivity for live video delivery was impractical

Ensuring 24x7 Lowering Backup Costs

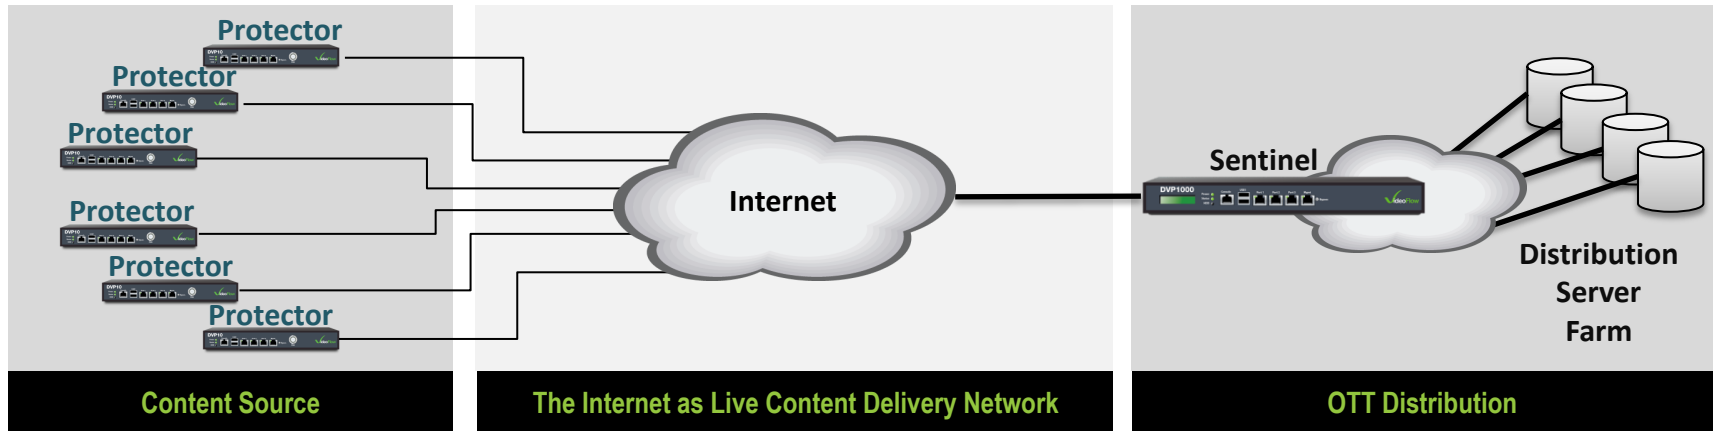

Both primary and backup leased lines are always active
Primary is in use 99.999% of the time, backup only 0.001%, Same OPEX
Leveraging the Internet for backup will dramatically cut your backup cost

Cutting Costs – Live Content Delivery to OTT

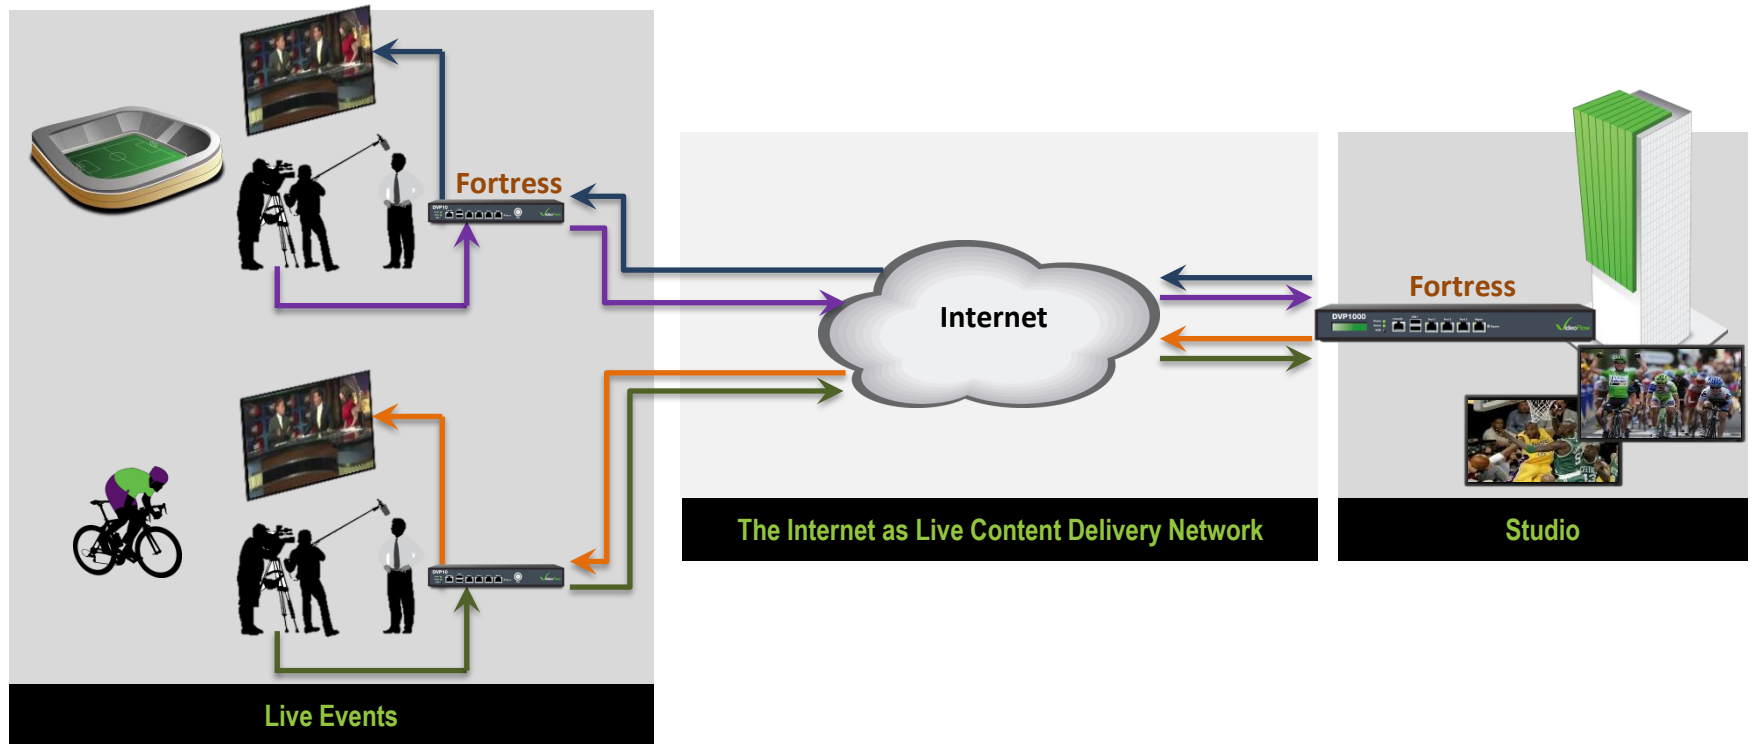

The cost of Live Content Delivery over the Internet is considerably lower than current solution

Live Events – Close Teamwork

Low delay, error free, high quality video feed from live event to studio and from studio to the live event

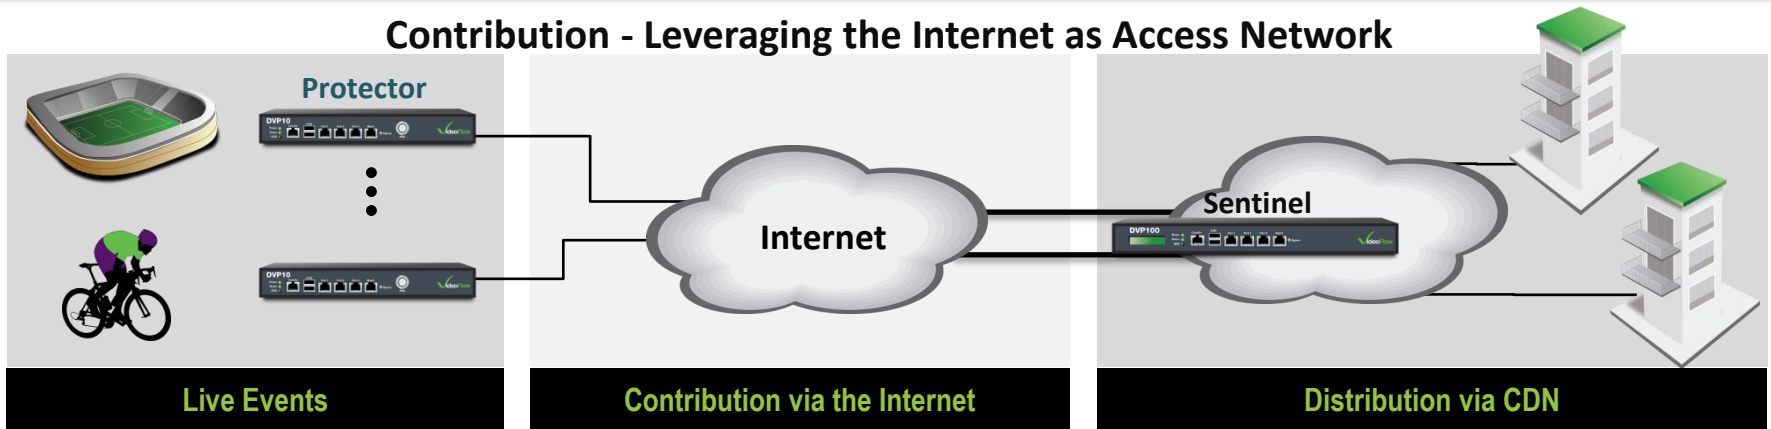

Feels as if you were in the studio – Natural broadcast from the field

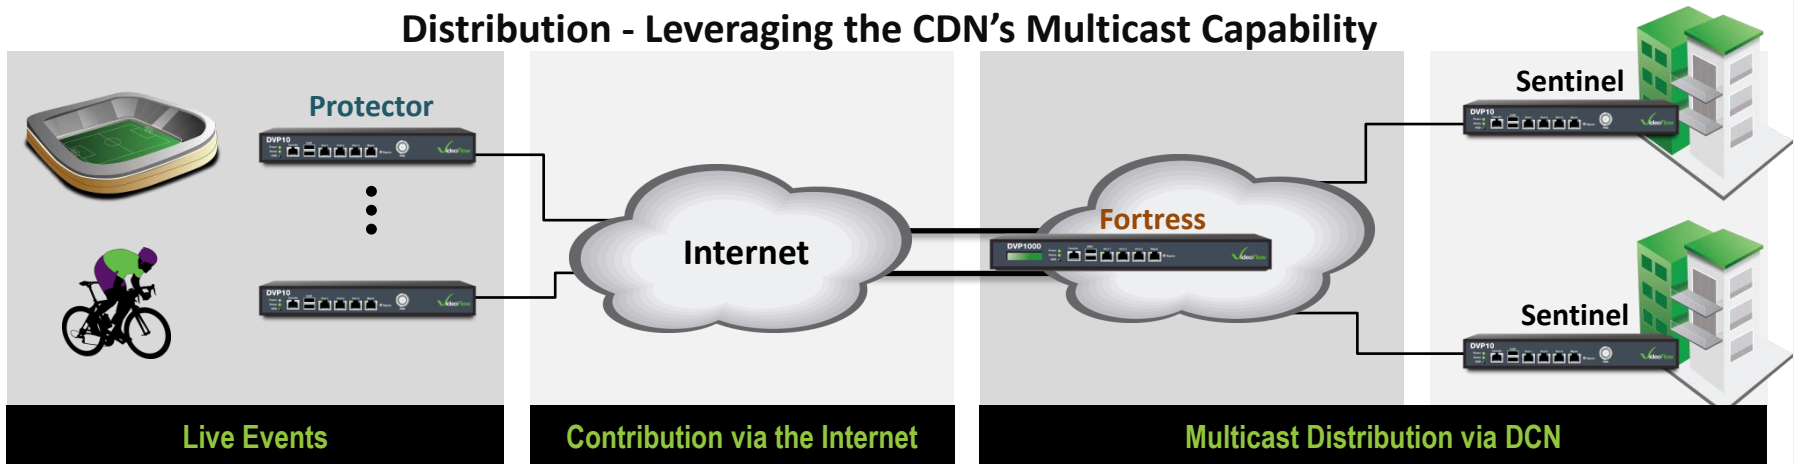

Improving the local extension

Extending CDN reach to potential customers by lowering connectivity cost

Contribution - Leveraging the Internet as Access Network

Distribution - Leveraging the CDN's Multicast Capability

Must Have Features

Stream Monitoring – ETR290

Cuts the cost of network maintenance and support
Reduces the time it takes to isolate a problem in the network
Clearly indicates where the issue is

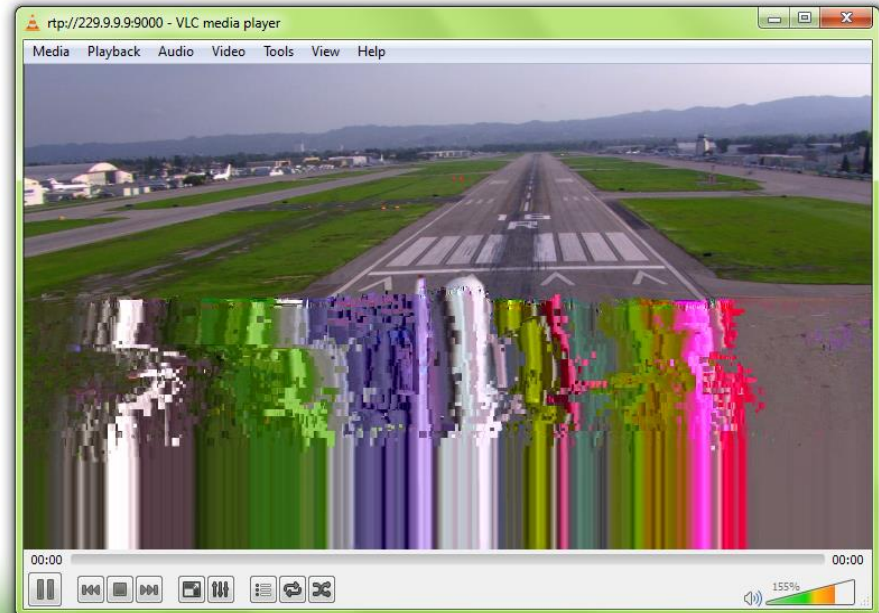

Configuration | **Streams** | Interfaces | ETR 290 | Alarms | Tools | Logout

tunnel		229.9.9.9	9000	10000008	9906848	941.52	966549	137646	Show unrecovered 

Stream : tunnel

Zoom 1M 5M 1h 1d All

The image shows a VLC media player window titled 'rtp://229.9.9.9:9000 - VLC media player'. The window displays a video of a crowd of people on a snowy mountain slope. The video is heavily corrupted, showing significant vertical streaking and color distortion. The VLC interface includes a menu bar (Media, Playback, Audio, Video, Tools, View, Help), a playback progress bar at the bottom, and a volume control icon on the right.

Stream Monitoring – Packet Rate

Cuts the cost of network maintenance and support
Easy to see network bandwidth issues

Configuration Streams Interfaces ETR 290 Alarms Tools Logout

rtsp://229.9.9.9:9000 - VLC media player

Secured and protected
Generic Routing Encapsulation (GRE)
Optional IPSec encryption
Remote site In-band management

No Premium Services

Point-to-Point – Deploying LCDN Over the Internet

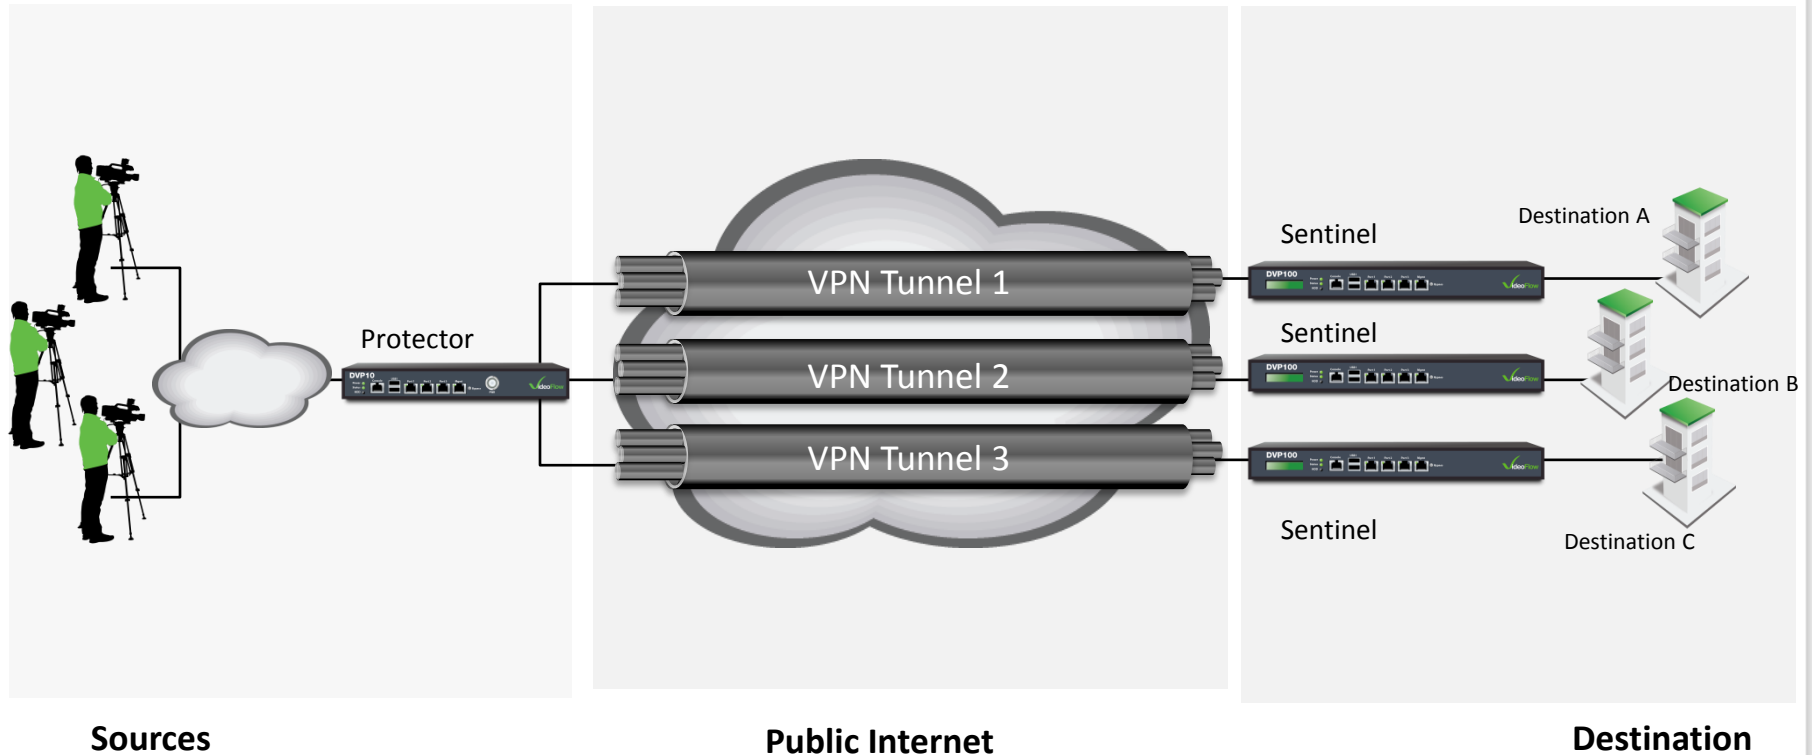

Single VPN tunnel can include single or multiple live video streams
The sentinel eliminates the jitter of all streams inside a tunnel
Stream tunnel is leveraged to manage remote site in band

Point-to-Multipoint – Deploying LCDN Over the Internet

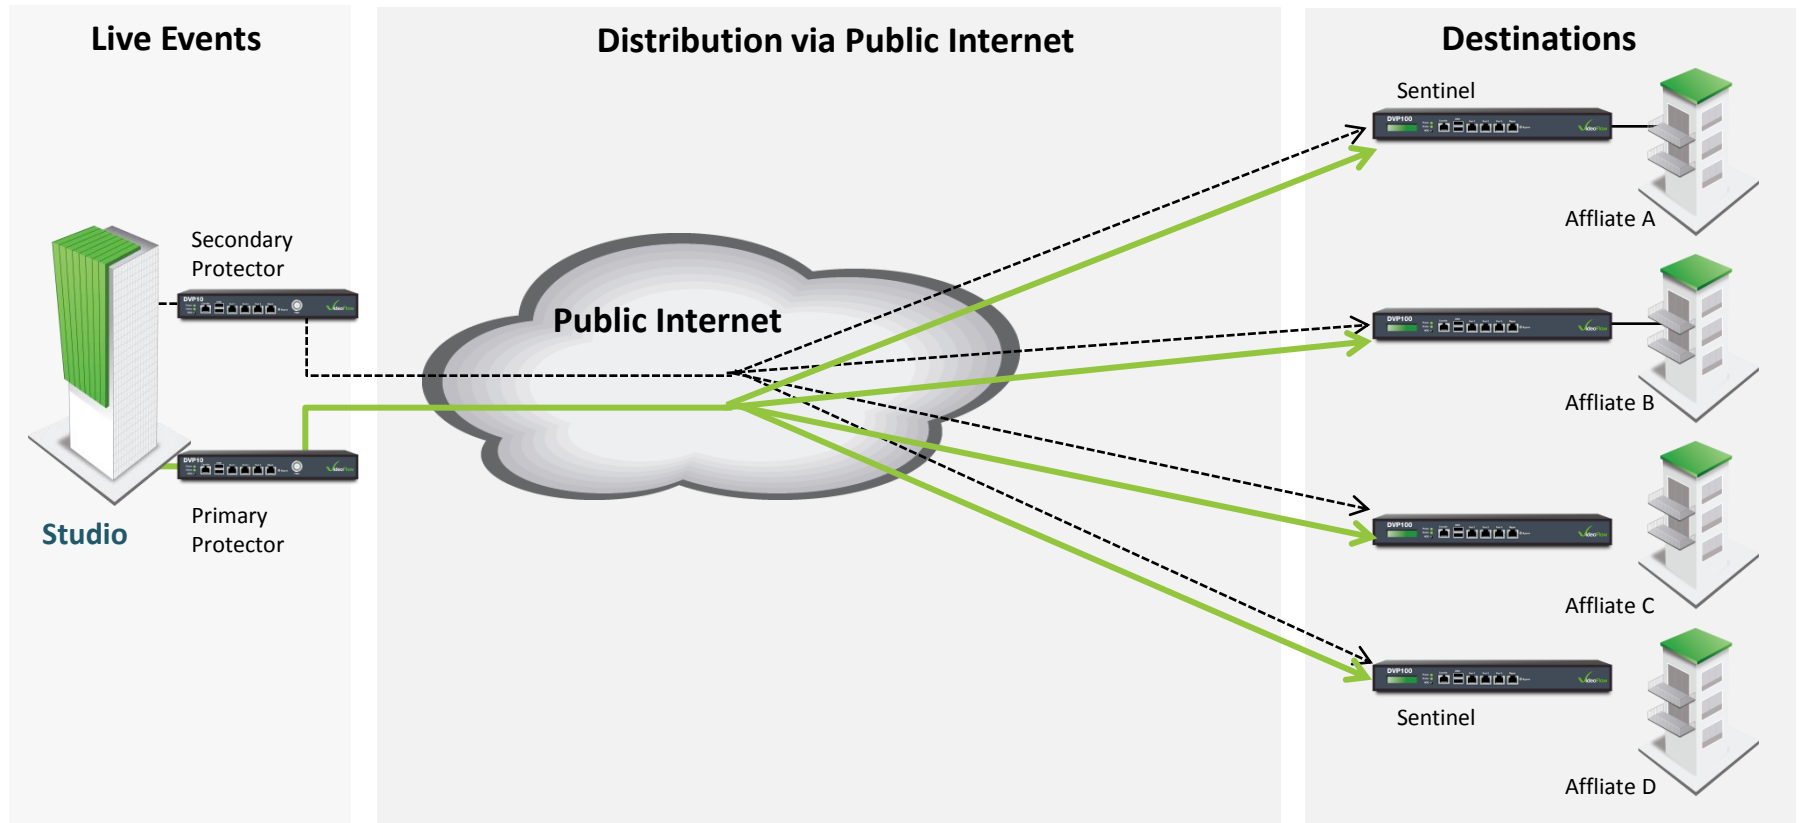

Protector creates and maintain multiple VPN tunnels to remote sites
Each VPN tunnel can include single or multiple live video streams
Independent jitter removal capabilities

Redundancy – High Quality Content 24x7

Auto redundancy assures active protector-sentinel at all times
1:1 redundancy by exchanging information allowing smooth switchover
Built in network bypass ensuring no connection is lost in case power is off
